Making Software Value Visible.

We’re passionate about helping companies achieve their IT-related goals by facilitating the creation of software that has a measurable impact on the business.

We believe the future of the software industry is one in which the value of all software is visible and openly discussed between the entire organization, so that resources are used most effectively and ROI can be tracked.

Our Mission

Our mission at DCG is to make software value visible. We help IT and the business collectively measure and maximize the flow of software development value in order to foster improved decision making and resource management and to quantifiably impact a company’s bottom line.

How We Can Help

We offer proven services in Function Point Analysis, Software Value, and Software Estimation, all of which can be customized and combined to meet the needs of your organization. Our expertise enables us to position organizations for high quality, on-time, and on-budget delivery of software through all phases of the development lifecycle.

“It’s frustrating that there are so many failed software projects when I know from personal experience that it is possible to do so much better – and we can help.”

Mike Harris, DCG President

Results

- High quality, high-performing software that has a measurable impact on an organization
- Improved resource management
- On-time delivery
- Reduced risk
- Improved customer satisfaction
